

UFO CXx Extrusion Systems

Cabinet mounting extrusions allow the use of conventional recessed downlight type fittings where it is only possible to surface mount.

The extrusion forms a conduit which conceals the fiber tails until they can be exited from the end. We normally supply the harness pre-fitted to the extrusion or we can supply the extrusion on its own.

As detailed above, there are five different sizes of extrusion available, from the largest, CX1, to the smallest CX5.

All our extrusions have sliding front faces to allow fiber and fittings to be mounted easily.

The small CX5 extrusion is unique in that it does not allow for downlights to be fitted to it. Instead it allows for the mounting of fiber tails which shine out through the small holes in the extrusion's surface.

Standard lengths and colors

Extrusions come as standard in the maximum lengths shown below. They can be cut to size required, or joined to make longer lengths.

Standard colours are detailed below however we can powder coat these to any available RAL colour.

Part Number	Standard Length	Standard Color
CX1	6 metres (19.68 ft)	Black anodised
CX2	4 metres (13.12 ft)	Raw aluminium
CX3	3 metres (9.84 ft)	Raw aluminium
CX4	3 metres (9.84 ft)	Raw aluminium
CX5	3 metres (9.84 ft)	Raw aluminium
