

Light Wands

Light Wands are a smaller version of the Light Tubes. Available in **Standard 20mm** diameter and **Mini 14mm** diameter they come as standard with black or silver anodised finish but can also be painted to a custom colour. The Light Wands use polymer fibres at close spacings to give a very even wash of light ideally suited to use in small display cases or to light pictures or information boards. Fibre choice of 0.75mm, 1mm or 1.5mm polymer is determined by the throw of light needed and how close the scallops of light need to merge. Light wands can also be supplied as gantries with 1" diameter legs in a powder coated finish.

Consider the following when specifying Light Wands: the dimensions of the area to be lit; the space required to feed through the diameter of the wand at its widest point (usually the end cap); how the tails can run back to the light source; the intensity of light required. End caps are available if required. Following are the maximum lengths achievable with light wands lit from one end.
