

REVISION: B1

Product Overview

A large trumpet fitting with a threaded back for securing through a surface.

Available in a range of finishes, this fitting allows for the light beam to be focused, and is particularly suited for use with our range of mounting extrusions.

Our downlight fittings are suitable for use in a variety of different applications and are the ideal solution for the illumination of static objects within a display case or cabinet.

Uses include:

- Museum and gallery cabinet and display lighting
- Accentuation of pictures and other objects
- Illumination of shop displays
